TO WHOM IT MAY CONCERN

Messers Indus Valley Construction Co. Ltd., have executed a number of drilling projects including core drilling for copper exploration for Federally Administered Tribal Areas Development Corporation. These projects invariably extended over vast area comprising many hundreds of square miles in the remote and very often inaccessible parts of the Tribal Area bordering the North West Frontier Province and Afghanistan.

2. Working successfully in the Tribal Area not only requires technical know how and skill, but is greatly dependent on sound and efficient administrative and logistic support. The widespread locations with non-existent facilities such as access roads, water supply and electricity, lack of accommodation facilities etc, coupled with hostile local conditions make working in the Tribal Area a difficult and hazardous operation, By virtue of their long and varied experience the performance of Messers Indus Valley Construction Co. Ltd., has been commendable. They have always been keenly aware of the time limitations imposed on them and have not only met the contract deadlines, but have often finished their work ahead of ^{time} over the last six years, and has not hesitation in recommending the use of their services to anyone who may wish to undertake any kind of drilling operation anywhere in Pakistan.
